

ACPV ARCHITECTS

ANTONIO CITTERIO PATRICIA VIEL

POLICY for the Environment and Health and Safety

ACPV ARCHITECTS SRL was founded in 2000 by Antonio Citterio and Patricia Viel, with headquarters in the centre of Milan.

The company carries out architectural, urban planning and interior design projects using BIM methodology and is a recognised leader in its market sector.

With the full support of its collaborators, the firm strives to ensure the sustainable development of ACPV ARCHITECTS SRL and of the area in which it operates, and to guarantee the health and safety of its employees and collaborators, simultaneously ensuring legal compliance through:

- Environment, Health and Safety objectives and programmes to eliminate, reduce and/or effectively manage risk factors that may affect the environment, communities, people and processes;
- Proposal of projects that are increasingly safe for and compatible with the environment;
- Close cooperation with third-party companies operating within the premises, to ensure that they work to minimise the risks to all staff, visitors and the environment.

In order to achieve these results, the company has identified the UNI EN ISO 14001 and UNI ISO 45001 standards as the means to help support the organisation in maintaining and improving the expected levels of excellence. The Integrated Environment and Occupational Health and Safety Management System is a tool for defining and implementing corporate objectives and is aimed at achieving a structured approach to reducing environmental impact and increasing safety, taking in consideration all organisational, technical, economic, regulatory and legal implications.

Management pursues improvement of the organisation's performance through:

- dissemination of awareness within the organisation with regard to environmental protection and safety issues and the related technical-organisational disciplines, promoting attention to health, safety and environmental issues by all collaborators;
- identification and assessment of the environmental effects and health and safety risks due to accidents, potential accidents and emergency situations, including those attributable to climate change;

ACPV ARCHITECTS

ANTONIO CITTERIO PATRICIA VIEL

- definition of the company's environmental and health and safety objectives and implementation of the programmes to achieve them;
- implementation of programmes to reduce, where possible, energy and raw material consumption, to contain pollution and to minimise the environmental impacts of its activities arising both directly and as a result of carrying out its projects;
- management of waste in a way that encourages activities such as recovery and recycling rather than disposal;
- achievement of employee satisfaction within the company;
- involvement of suppliers, asked to cooperate in compliance with the principles of the policy;
- promotion and development of an open dialogue with the local communities and relative authorities, employees and collaborators;
- protection of the environment, preventing and reducing potential risks due to its activities;
- introduction of control and audit methods for the management system;
- implementation and updating of the management system and support for the processes, ensuring the appropriate amount of resources;
- maintenance of certification to UNI EN ISO 14001 and UNI EN ISO 45001 standards, with regular system reviews that include checks on the improvement of individual processes, adequacy of the policy and objectives for occupational health and safety and the environment.

Management is confident that timely compliance with these rules will, therefore, lead the organisation onto a path of continuous improvement.

Management also undertakes to periodically check the adequacy of this document, with the aim of keeping its Policy in line with the evolving priorities of the company and the context in which it operates.

This policy is communicated to all staff, sent to all interested parties who request it, and published on the organisation's website.
